Design Choice

My high-fi wireframe layout resembles my lo-fi wireframe in terms of layout and information that I choose to include on the page. One important characteristic of my design is that I try to make it easy for users to make changes to the items in the shopping cart. Fields users can modify include glaze selection, quantity selection, and the ability to delete an item. Specifically, I choose to display glaze selection as a dropdown menu because I believe that when users want to make a change to the glaze, they already have an idea of what glaze they want instead, so it's redundant to display all glaze options on the shopping cart page. Moreover, for the quantity selection field, I added a "minus" button and a "plus" button for users to either increase or decrease the quantity for an item. Lastly, I also added an "x" button for users to easily delete any item they no longer want.
